## Summary:

In high school, I did mathematics & physics for my diploma and then went to the university to study physics. However, because of my abiding interest in the field of design Engineering, I decided to study industrial design, an interdisciplinary major, as my future career, incorporating science, industry, management, and art. In this field, I am more interested in product design, service design and architecture. I would like to create objects challenging innovation, contemporary works and sustainability which synergistically improve life quality.
